                                                                                                        diagnostic use. The genes are cloned by screening a rat cerebral cortex cDNA library with a probe based on nucleotides 170-225 of the non-coding strand of porcine brain (ml) cDNA (modified at positions 5, 38 and 53); identifying cDNA clones by hybridisation with BamHI or XhoI digests of plasmid DNA from 12 cultures contg. up to 500000 independent clones; reculturing until a pool contg. less than 5000 independent clones with a single hybridisation band are identified, and isolating individual clones by colony hybridisation.

Stable cell lines are produced by transfecting Chinese hamster ovary cells (CHO-KI) with various pCD vectors contg. the gene inserts.

reculturing until a pool conty. Less than 5000 indep. clones with a single hybridisation band are identified, and isolating individual clones by colony hybridisation.

Stable cell lines produced by transfecting Chinese hamster ovary cells (CHO-K1) with various pCD vectors conty. the gene inserts.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 15
                                           The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with comprises contacting a biological sample from the patient with comprises contacting a biological sample from the patient with comprises contacting a biological sample from the patient with comprises to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in comprise contact and are derived from the tissues of various corganisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating compostate cancer in mammals. The prostate cancer associated genes are useful for diagnosing or treating prostate cancer, as well as for contentifying modulators of prostate cancer or agents that inhibit compostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5471 5570: gap of 100 bp in length 7155 contig of 1585 bp in length 7156 gap of 100 bp in length 7256 gap of 100 bp 9506: contig of 2251 bp in length 9507 9606: gap of 100 bp 11993: contig of 2387 bp in length 11994 12093: gap of 100 bp in length 12094 14691: contig of 2598 bp in length 14692 14791: gap of 100 bp 17205 17304: gap of 100 bp 17305 1938: contig of 2413 bp in length 17205 17304: gap of 100 bp 19238: gap of 100 bp 21611 21710: gap of 100 bp 21611 24767: contig of 372 bp in length 26868 34107: contig of 7240 bp in length 34208 42405: contig of 7240 bp in length 42406 42505: contig of 8198 bp in length 42406 42505: contig of 8198 bp in length 42406 42505: contig of 8198 bp in length

(1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequencing reads that have not been assembled into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This record contains 88 individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Center project name: L24889

                                                                                                   NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 48 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                               as soon as it is available and the be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

NOTE: This is a "vorking draft" sequence. It currently
consists of 62 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Direct Submission
                                                                                                                                                     NOTE: This is a 'working draft' sequence. It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                    Sequencing vector: Plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of read Assembly program: Phrap; version 0.960731 Consensus quality: 149015 bases at least Q40 Consensus quality: 152019 bases at least Q30 Consensus quality: 152932 bases at least Q20
